Jarle Ravn

PLANNING AND IMPLEMENTATION OF HYDROPOWER PROJECTS

1992
NORWEGIAN INSTITUTE OF TECHNOLOGY
DIVISION OF HYDRAULIC ENGINEERING
# TABLE OF CONTENTS

1. Introduction .......................................................... 7

## INVESTIGATION

2. Investigation of Resources ........................................... 11
   — Basic Investigations ................................................. 11
   — Purpose Oriented Investigations ................................. 11

3. Investigation of Hydropower Projects .......................... 13
   Foreword ....................................................................... 13
   Planning Parameters and Data ..................................... 14
   Power Market ................................................................. 14
   Hydrology ..................................................................... 17
   Topography (Surveys and Mapping) ............................... 28
   Geology, Soils and Materials ....................................... 30
   Environmental Issues ............................................... 34
   Project Appraisal and Socio-Economic Considerations .... 35

## PLANNING

4. The Hydropower Development Cycle ........................... 41

5. Reconnaissance Studies ............................................. 47

6. Prefeasibility Studies ................................................ 59

7. Feasibility Studies ..................................................... 71

## IMPLEMENTATION

8. Engineering ............................................................ 107
   A. Design and Procurement ........................................... 108
   B. Contract Arrangement Options ................................. 131
   C. Detailed Design and Work Drawings ......................... 137

9. Construction and Supply ............................................ 141

## OPERATION

10. Management and Operation of Hydropower Installations .... 155

Appendix: Planning, Design and Management Resources ...... 165

Glossary ................................................................. 173
LIST OF FIGURES, SCHEDULES AND TABLES
(First digit refers to chapter)

Figure 3.1 Hydropower Development Flow Chart ..................36
3.2 24 Hours Load Curve ..................................................15
3.3 Derivation of Flow Duration Curve ...............................27
3.4 Duration Curve ..........................................................28

Figure 4.1 Hydropower Resources, Investigation and
Selection of Projects ....................................................42
4.2 Hydropower Development Cycle .................................43

Figure 6.1 Project Formulation ........................................60

Figure 7.1 Hydropower Layout Options .............................80
7.2 Storage Options ........................................................81
7.3 Tunnel Waterways, Sections .....................................86
7.4 Economic Analysis ..................................................96
7.5 Financial Analysis ...................................................96
7.6 Selection of Supply, Least Cost Comparison ...............97
7.7 Feasibility Study Flow Chart .....................................103

Figure 8.1 Interaction of Implementation Tasks ..................106

Figure 9.1 Risk Distribution as Function of Contract Type ....146

Figure 10.1 Cost of Electricity ..........................................161

Schedule 5.1 Hydropower Implementation Schedule ........57

Schedule 7.1 Main Data for Hydropower Planning and Design 73

Schedule 8.1 Construction Schedule ................................139
8.2 Contract Types .......................................................114
8.3 Form used for Bills of Quantities ..............................119
8.4 Tendering Procedure Flow Chart ..............................122
8.5 Contracting Models ................................................136
8.6 Implementation Models ..........................................137

Schedule 9.1 Organisation Schedule, Owner's Field Operations 142

Table 7.1 Economic Analysis Cash Flow ..........................104
7.2 Financial Analysis Cash Flow .................................104
